

Programming languages (TC-2006)

Homework 01

The first homework consists of taking two brief online tests that will help us improve your learning experience in this course.

1 Test I - Identify your main learning style

Before going any further, it is important that you identify your main learning style and let me know your results. This information will help me understand how you learn and how to adapt the materials from the course to better fit your needs.

Complete the test "What is your learning style?"¹. Please have in mind that there are no good or bad answers and that the more honest your answers are, the more useful the result will be.

2 Test II - Improve your study habits

Another important issue related to your learning styles are your study habits. Complete the test "Which study habits can you improve?"².

Deliverables

Once you complete test I (learning style), save your results into a file (as a JPG, PNG, or PDF) and submit it to Canvas. On your own, study the recommendations that apply to your main learning style. There is no need to submit the results of test II since you are the one who has to use that information and analyze what you can do to improve your study habits.

I promise to apply my knowledge, strive for its development, and not use unauthorized or illegal means to complete this activity, following the Tecnológico de Monterrey Student Code of Honor.
